

# PRODUCTION STAMPINGS

Tempco has been providing high quality precision metal stampings since 1945. Our metal stamping process uses both station & progressive tool & dies to transform flat metal material sheets into different products for OEM markets. We provide stamped metal parts across many industries for multiple applications.

Our metal stamped parts are produced on mechanical presses ranging from 22 tons up to 440 tons on sheets of material including but not limited to steel, stainless steel, aluminum, galvanized, spring steel, copper, etc. We specialize in short to medium runs but also have the capability to do long runs on coils with progressive tools.

We produce only the highest quality stamped parts. Our work force is dedicated and committed to quality through the training and immersion of our quality processes. Quality is always our first priority here at Tempco. We continually invest in the latest inspection equipment, people, and training to ensure parts are made exactly to your specification.

Our quality management system is AS9100, ISO 13485, & ISO 9001 certified. We also have our Federal Firearms License to service the firearms industry.

Over the years Tempco has invested in the latest stamping technology by devoting numerous dollars in new stamping presses, machines for our tool and die shop, and training of employees in the latest stamping knowledge.

Make Tempco Manufacturing your first choice for metal stampings. You can visit our website [www.tempcomfg.com](http://www.tempcomfg.com), submit a request via [info@tempcomfg.com](mailto:info@tempcomfg.com), or call us at 651.452.1441.
