

SHEET METAL FABRICATION & ASSEMBLIES

Tempco Manufacturing provides sheet metal fabrication services that create custom, detailed sheet metal components, weldments, and assemblies. Our sheet metal fabricating process utilizes CNC laser cutters, CNC automated turret presses, CNC press brakes, welding, and various assembly processes to transform flat metal material sheets into different components, weldments, or completed assemblies for OEM markets across numerous industries for multiple applications.

In recent years Tempco has invested heavily in our CNC fabricating equipment. New investments include a new Omax Max-tem water jet, Amada FOL3015AJ fiber laser cutter with a material tower, and Amada EMK M2 Series turret press with a material tower. With our material towers we are able to run lights-out for 24/7 production saving the customer time and costs.

To complement our core in house production sheet metal fabrication services, and to provide you with turnkey products, Tempco offers value added capabilities consisting of, but not limited to:

- Complete Welding & Grinding
- Deburring & Cleaning
- Hardware Installation
- Full Assemblies
- Plating
- Powder Coating
- Anodizing
- Machining
- And many more...

We produce only the highest quality fabricated parts. Quality is always our first priority here at Tempco. We continually invest in the latest inspection equipment, people, and training to ensure parts are made exactly to your specification. Our quality management system is AS9100, ISO 13485, & ISO 9001 certified. We also have our Federal Firearms License to service the firearms industry.

Let Tempco Manufacturing be your complete one stop shop for sheet metal fabrications. You can visit our website www.tempcomfg.com, submit a request via info@tempcomfg.com, or call us at 651.452.1441.
